

WHAT'S THE MATTER?

Today we will be revising the three states of matter and learning more about atoms

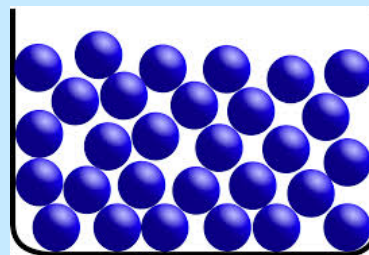

1: WE ARE LEARNING TO DESCRIBE THE THREE STATES OF MATTER

The three states of matter are Solid, Liquid and Gas

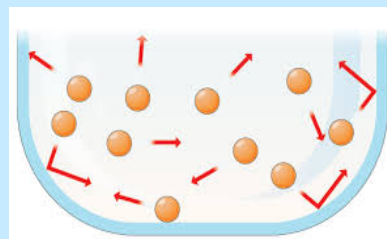

The particles in a solid are stuck tight together and they can't move. The space is too tight for them to move and they are all stuck together as a family.

The particles in a liquid are spreaded out and have some space to actually move around and be flexible and not tight together.

The particles in a gas are floating around in the air and being set free and they are not joined together.

Task Description: Today for inquiry/science I did What's the Matter? #1. It was really easy and fun doing this task. I enjoyed this task very much because i got to learn a lot from this small document. Please leave a positive comment on my blog. Thank you!
